ATKINS WOOD SAWS

Atkins line of Wood Saw Frames, Blades, Rods and Rivets for years have been the best on the market and we are proud to continue doing this, knowing that this line of Wood Saws still has the excellent material and workmanship that has been typical of all Atkins Products.

FRAMES

Made of carefully selected, straight grain hardwood that is thoroughly seasoned and kiln-dried, these frames are strong and rigid. The new type brace is an improvement over anything previously offered. They are smoothly machined and have perfect balance. The weather resisting red enamel protect the frame. All frames are carefully inspected.

BLADES

Made of Atkins SILVER STEEL and SPECIAL STEEL, these

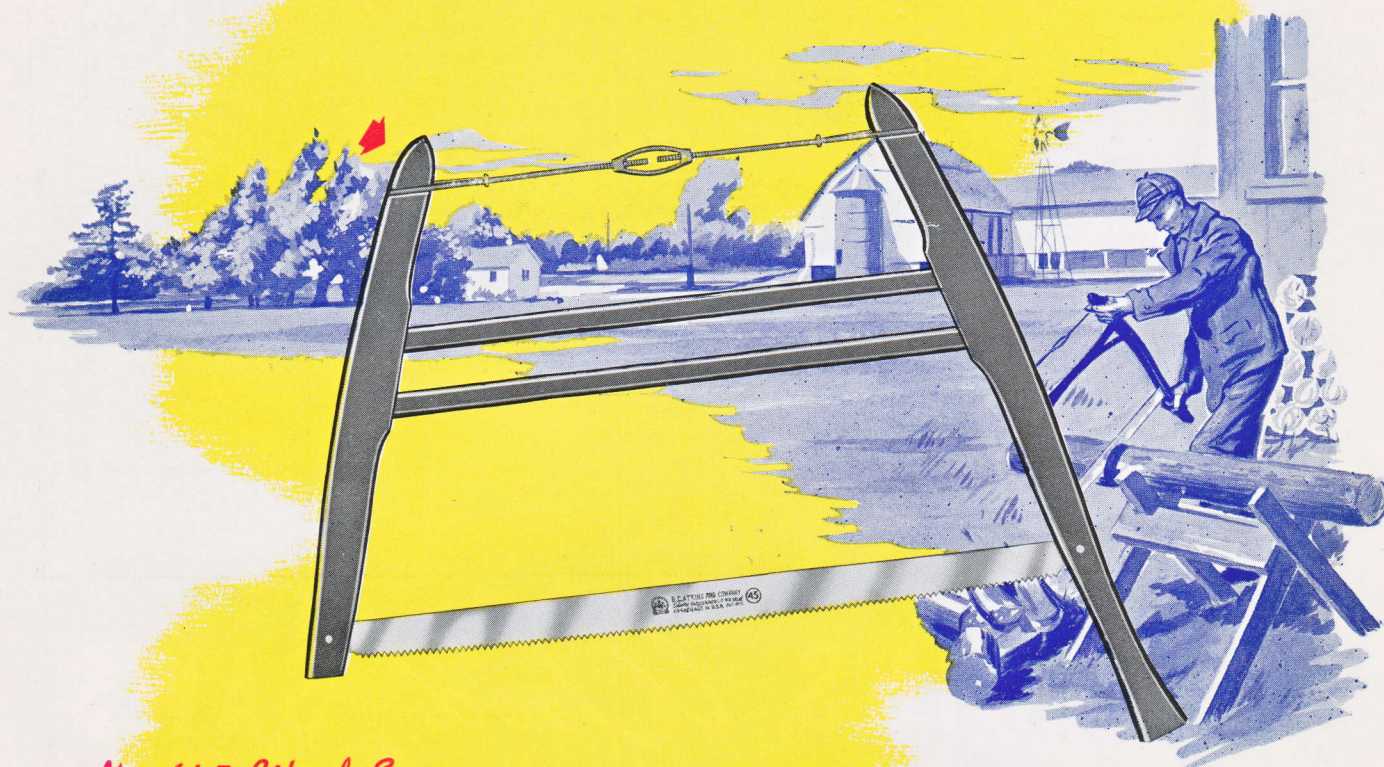

blades are straight or breasted on the tooth edge and come in various widths. Made Standard Plain or Tuttle Tooth, they are precision ground and polished and are filed and set ready for use. All Atkins blades cut easy and fast.

RODS

Atkins rods are made in the "Clipper" plain and rust-proof and "Jumbo" in rustproof patterns. The malleable turnbuckles have a full screw thread guaranteed not to strip.

PACKAGES

Wood Saws complete are packed unassembled, one-half dozen in a box, including Frames, Blades, Rods and Rivets. Frames only or Frames and Rods only, packed in the same manner when specified. Frames in bulk (wood parts only), packed in half-gross crates if so ordered.

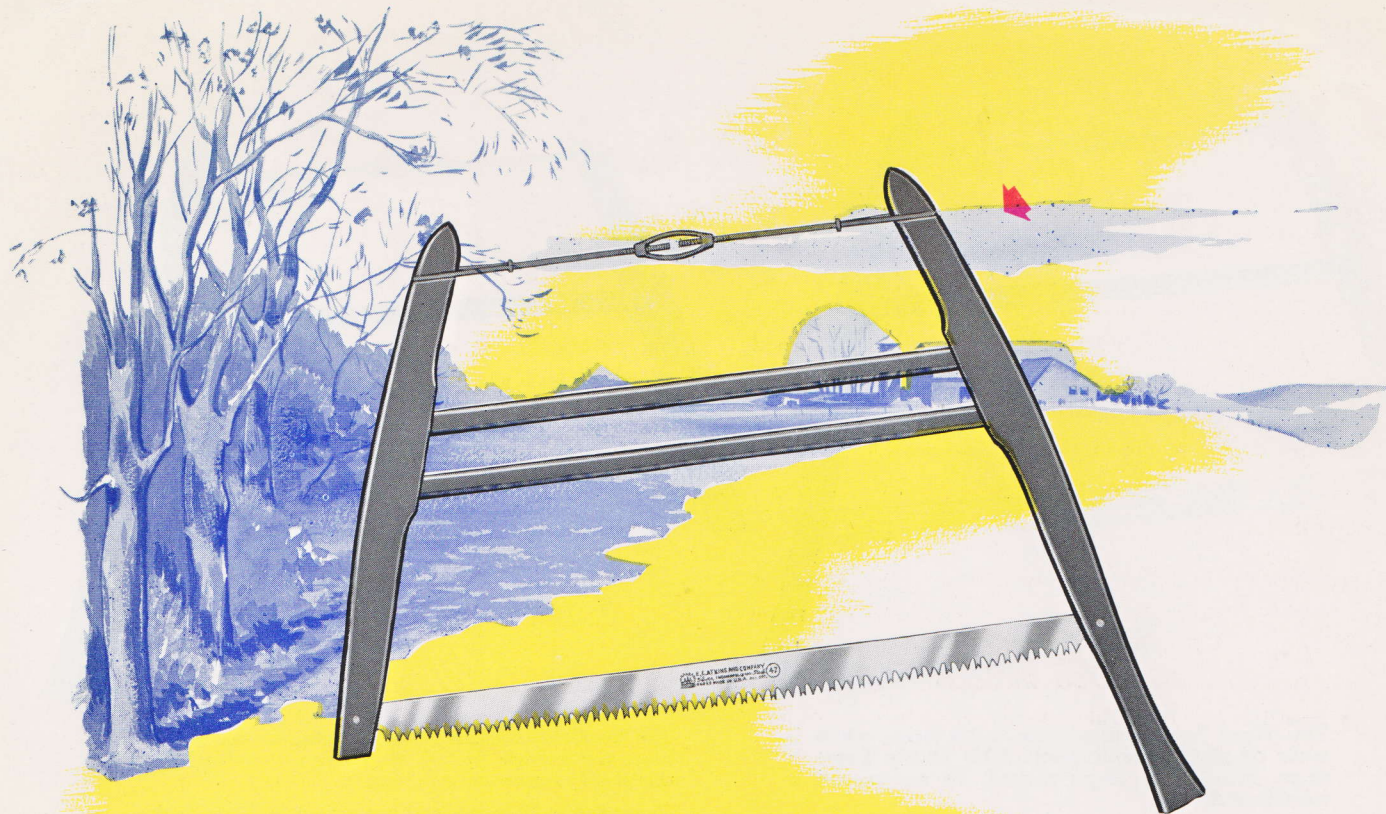

No. 645 Wood Saw
